

# Confused about what to wear ?

# *Colors Combination and Advisor For Clothing Selection*

*A halt for daily confusion while getting  
ready for Various occasion*

# Abstract

- **Choosing** the right color combination for clothing can greatly impact one's appearance and confidence in various settings. This project aims to develop a machine-learning model that helps users select the optimal color combinations for different occasions such as meetings, casual outings, or formal events. By analyzing color psychology and fashion trends, the model suggests the most suitable color combinations based on the user's preferences and the context of the event. The project utilizes machine learning algorithms and other technologies to provide personalized recommendations, enhancing users' fashion choices and confidence.

# Data Set Used

	Pattern	Color1	Color2	Occasion	ColorCombination
0	Solid	Red	White	Meeting	Red & White
1	Striped	Blue	Black	Casual	Blue & Black
2	Checkered	Green	Gray	Formal	Green & Gray
3	Floral	Yellow	Orange	Party	Yellow & Orange
4	Solid	Pink	Brown	Meeting	Pink & Brown
..	...	...	...	...	...
71	Floral	Red	Gray	Party	Red & Gray
72	Solid	Orange	Black	Meeting	Orange & Black
73	Striped	Blue	Green	Casual	Blue & Green
74	Checkered	Yellow	White	Formal	Yellow & White
75	Floral	Pink	Brown	Party	Pink & Brown

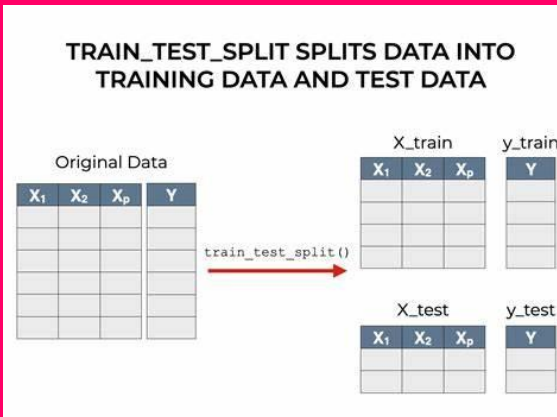

[76 rows x 5 columns]

# Importing Libraries & Data Cleaning

Importing Libraries & Data Cleaning to inspect and understand the structure and content of a dataset using the functions : 1. head: displays first few rows of DataFrame giving the overview of its structure and contents. 2. info: provide concise summary of DataFrame including its 3. size, data types, and memory usage. description: shows descriptive statistics summarizing the central tendency, dispersion and shape of DataFrame's distribution of numerical data.

# Dependencies

# Import Library and Import data
